

SOLID WASTE STREAMS

Household Solid Waste	your common everyday trash that has reached its end-of-life
Organic Waste	compostable waste such as food scraps and yard trimmings
Recyclable Waste	materials segregated for processing and reuse such as plastics, paper and metals
Hazardous Waste	materials with toxic, flammable or reactive properties requiring special handling such as household cleaner and batteries
E-Waste	electronic waste materials such as laptops, cell phones, TVs
Construction & Demolition	materials generated from building renovation or demolition projects such as wood, drywall and rubble
Commercial Waste	waste produced by businesses, trade activities, or industrial premises, including offices, shops, restaurants, and warehouses
Industrial Waste	waste refers to waste generated through manufacturing activities, industrial operations, and primary industries such as mining, forestry, agriculture, and resource extraction
Institutional Waste	non-hazardous waste generated by public and private organizations such as schools, hospitals, government buildings, and non-profit organizations
Agriculture Waste	organic and inorganic residues and by-products generated from farming, livestock rearing, and agro-industrial processing
